SUMMARY

Backend-oriented full-stack developer with experience building Laravel REST APIs, React-based web applications, asynchronous workflows, and web scraping automation systems. Interested in backend engineering, workflow automation, and building software that solves operational problems.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, SQL

Frameworks & Libraries: Laravel, React.js, Node.js, SeleniumBase

Databases & Search: MySQL, PostgreSQL, MongoDB, Redis, Typesense

Tools & Technologies: Docker, Git, REST API, Midtrans, Vercel

EXPERIENCE

Web Scraper Intern

Apr. 2025 – Oct. 2025

PT Universal Big Data (UBIG)

Malang, Indonesia

- Built a hierarchical web crawler using Puppeteer to collect data on educational foundations and affiliated schools across Indonesia
- Designed and implemented a relational database schema to organize more than 131,000 educational foundations and 75,000 schools while preserving hierarchical relationships
- Developed web scrapers to collect seller data from global e-commerce platforms using the company's internal scraping framework
- Maintained and updated over 200 existing web scrapers as part of a two-person team responsible for maintaining more than 400 scrapers, resolving issues caused by website changes, including broken selectors, parsing logic, pagination, and login workflows
- Built automated web scrapers using Python and SeleniumBase to retrieve shipping rates from multiple logistics providers
- Automated shipping rate collection by generating thousands of origin-destination combinations from MySQL data

PROJECTS

Verdko | *Laravel, React.js, PostgreSQL, Redis, Python, Playwright, Docker*

Jun. 2026 – Aug. 2026

- Built a full-stack marketplace price monitoring system with a React frontend and Laravel REST API
- Designed an asynchronous monitoring workflow using Laravel Queue, Redis, and a dedicated Python/Playwright worker for price collection
- Implemented price history tracking, price change detection, and alert management using PostgreSQL
- Integrated Telegram Bot API for automated price change notifications
- Containerized and deployed the application to a VPS using Docker, Docker Compose, and Nginx

E-Commerce Platform | *Laravel, React.js, PostgreSQL, Redis, Docker, Midtrans, Typesense*

Nov. 2025 – Jan. 2026

- Developed a fullstack marketplace style e-commerce application using Laravel REST API and React frontend architecture
- Implemented multi role authentication and authorization for buyers, sellers, and administrators using Laravel Sanctum
- Implemented marketplace-style payment workflows using Midtrans integration, webhook handling, and delayed seller payout logic
- Implemented automated delayed payout scheduling for seller settlement using Laravel Scheduler
- Integrated Typesense search engine for product search and filtering functionality
- Containerized local development environment using Docker Compose

EDUCATION

State Vocational High School 2 Mojokerto

Software Engineering (Vocational Program)

East Java, Indonesia

Jul. 2023 – Jun. 2026
